This presentation is provided for general information only and nothing contained in the material constitutes a recommendation for the purchase or sale of any security, nor an invitation to invest in the following strategy. Although the statements of fact in this report are obtained from sources that we consider reliable, we do not guarantee their accuracy and any such information may be incomplete or condensed. Also, views expressed in this presentation are based on research materials available from sources considered reliable. Views are subject to change based on additional or new research, new facts or developments. The investment risks described herein are not purported to be exhaustive. The persons interested on investing in this strategy need to be well informed investors as per local regulations. Any person considering an investment should seek independent advice on the suitability or otherwise of the particular investment. Investment products are not insured by government or governmental agencies. Investment and Treasury products are subject to investment risk, including possible loss of principal amount invested. Past performance is not indicative of future results: prices can go up or down. Investors investing in investments and/or treasury products denominated in foreign (non-local) currency should be aware of the risk of exchange rate fluctuations that may cause loss of principal when foreign currency is converted to the investors home currency.

Zindel Capital currently advises an open-end fund incorporated in Luxembourg utilizing the Zindel Global Diversified strategy. Share Class II (ISIN: LU1891688613) of this fund has a minimum investment of \$500,000 USD. Data in this factsheet represents net results after fees of 1.5% management and 15% performance. 2000 to 2017 back test results from KPMG audit report.

Diversification & Low Correlation

Global
Diversified
Strategies

Utilizing 5 asset classes with 5 proprietary sub strategies, the **Zindel Global Quantitative** strategy's objective is to generate high-quality risk-adjusted absolute returns to achieve long-term capital appreciation while maintaining a low correlation to traditional investments, common CTAs and other hedge funds.

Zindel
Global
Quantitative
Strategy

It pursues a long and short strategy in derivative instruments, offering an exposure to all asset classes with a diversified, non-discretionary, quantitative and systematic investment approach.

Asset Classes

Zindel
Global
Quantitative
Strategy

We started by selecting a series of instruments that offer exposure to all 5 asset classes.

Maximum Diversification & Deep Liquidity

All asset classes have 51 truly diverse instruments with minimum correlation.

The use of derivatives also allows the strategies to profit from the decline in value of such assets by opening short positions.

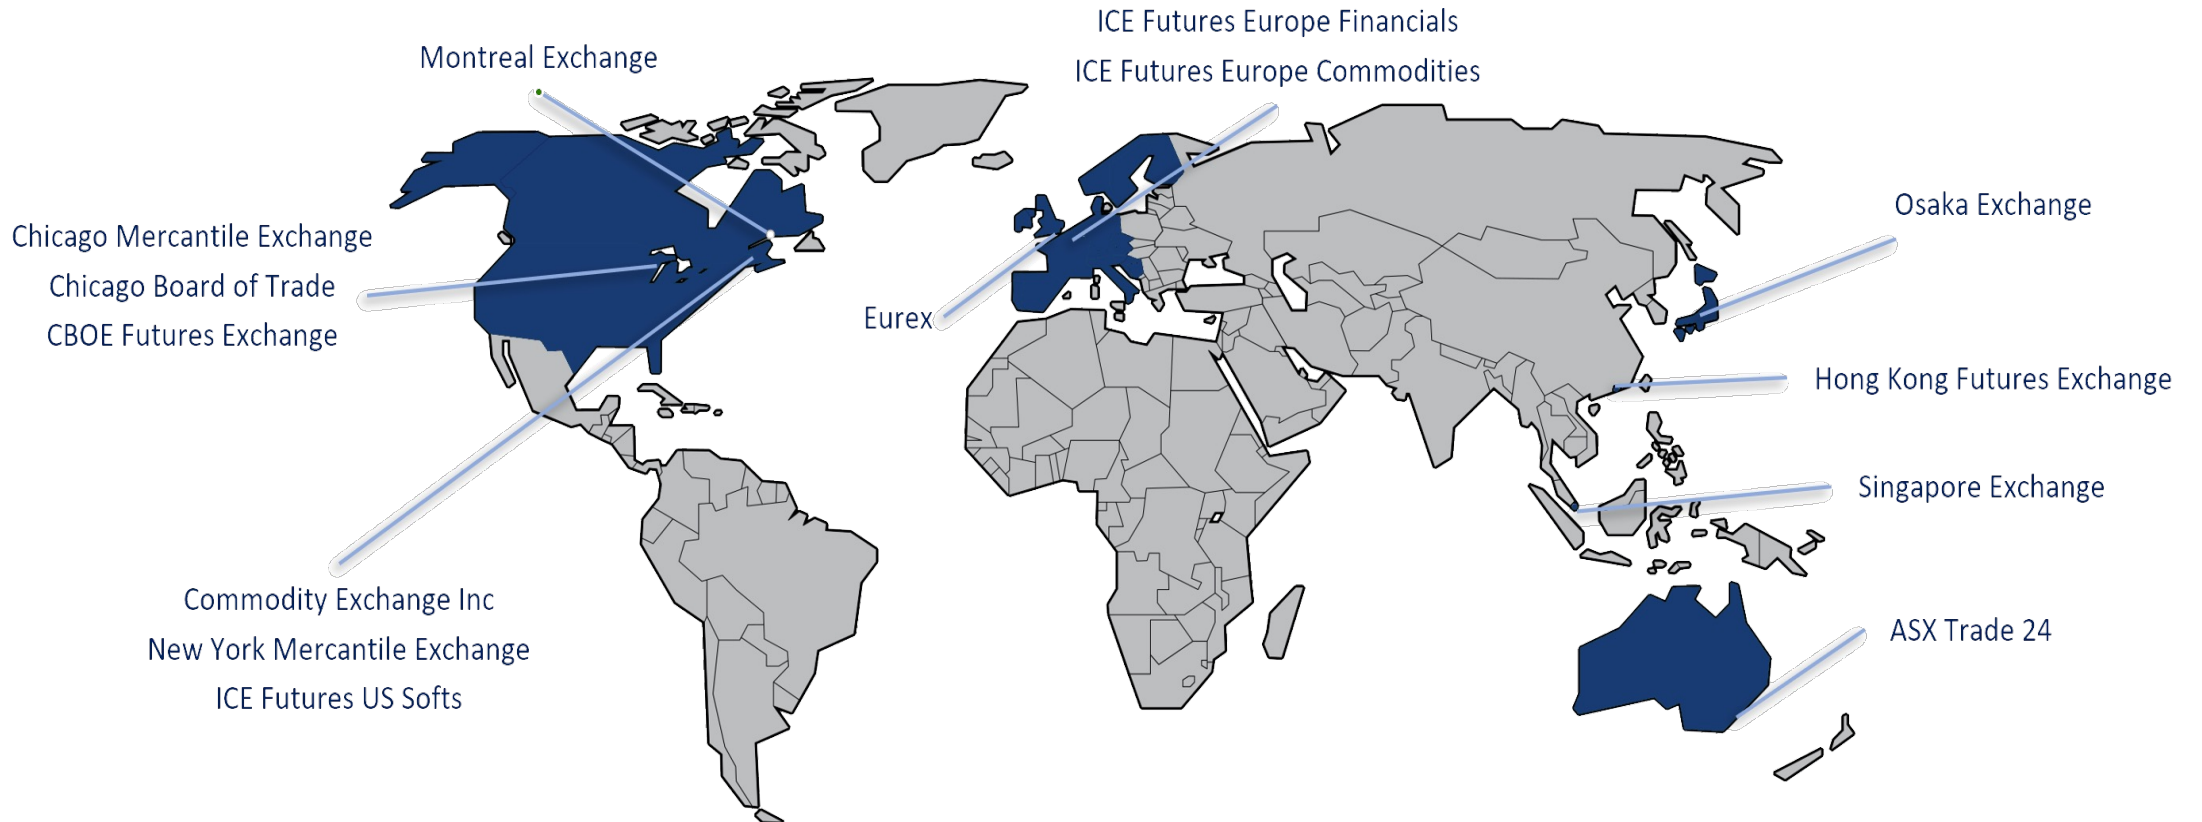

COMMODITIES	METALS	Gold	Silver	Platinum	Palladium	Copper

Stable Global Markets & Exchanges

All instruments operate in the exchanges of the most stable and dependable economies in the world: United States, Canada, Europe, United Kingdom, Japan, Hong Kong, Singapore and Australia. The strategies do not invest in OTC forwards.

Proprietary Sub Strategies

All sub strategies are based on economic fundamentals that have proven to bring value throughout the years; some dating back 100 years. No (blind) machine learning is used

CARRY

Is the difference between the spot and the forward price of an asset. We buy the asset forward if the carry is positive or sell it forward if the carry is negative.

PREMIUM
& PARITY

Through return premia and volatility weighting, it balances exposure to a basket of equity indices, basket of government treasuries and volatility.

RELATIVE
VALUE

Most and least valuable instruments drawn from the same asset class in the cross section.

SMART TREND
FOLLOWING

Winners tend to continue to do well, and losers tend to continue to do badly. Managing each signal specifically and smartly to reduce noise and maximize profits.

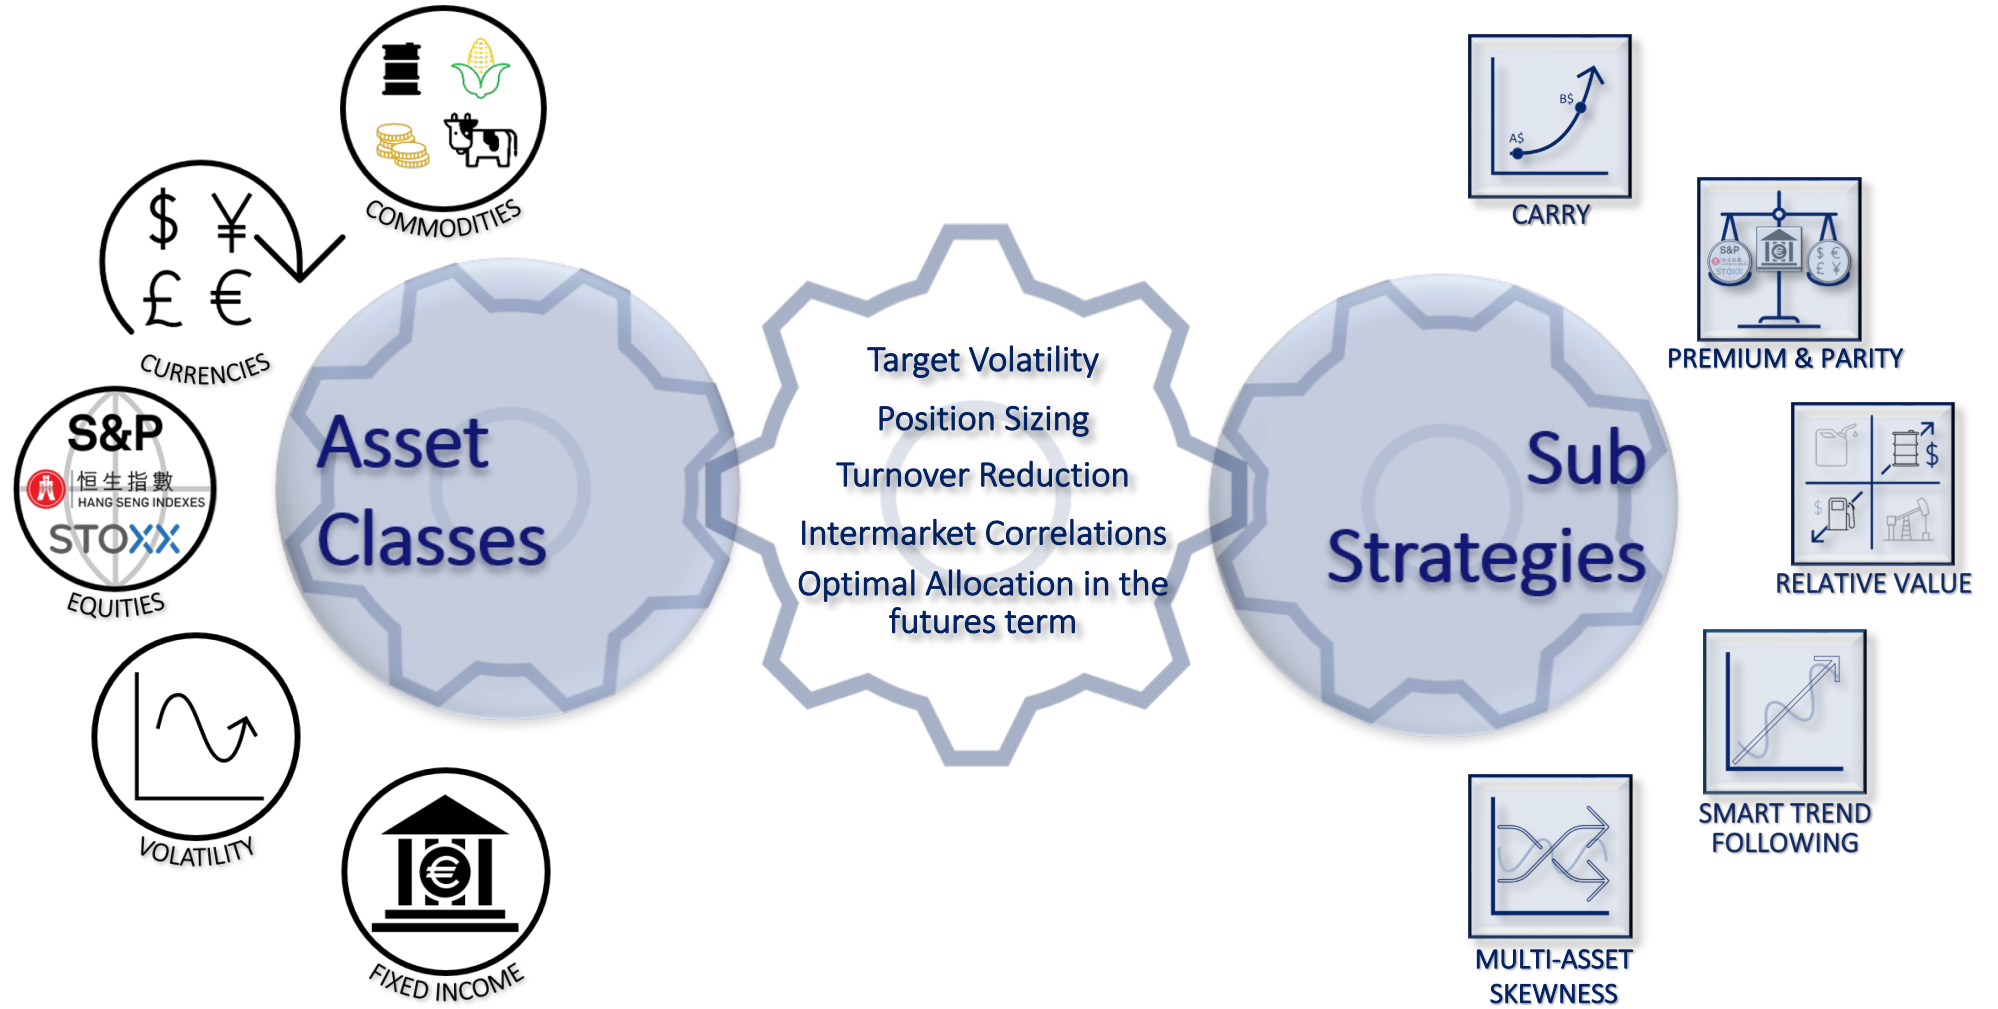

MULTI-ASSET
SKEWNESS

Investors pay a premium for assets that could earn them substantial returns, but with a very low probability. Also, there is a tendency to overweight the likelihood of extreme events, while underweighting the probability of occurrences that are most likely to happen. We capture the premia with a short/long mean reversion strategy.
